

# Animal Bites and Scratches

If your child is bitten or scratched by an animal, the wound can get infected. Clean the wound right away and get medical help as soon as possible. Even if the animal is your family pet, you should follow these steps:

1. Wash the wound well with soap and water.
2. Put pressure on the area to stop the bleeding.
3. When bleeding stops, put an antibiotic cream such as Neosporin on the wound.
4. Cover the bite or scratch with a clean bandage.
5. Get medical help the same day if possible.

Human bites should receive the same first aid and prompt medical attention as an animal bite.

Your child will be given a tetanus vaccine if he or she has not had one in the past 5 years.

Follow the treatment your child's doctor orders. Each day, until the wound heals, remove the bandage and check the wound. Clean the wound with soap and water each day and put on a clean bandage until the wound heals.

## **Call your child's doctor if:**

- The wound is red, swollen, warm to the touch, or more painful.
- There is more drainage or a bad odor from the wound.
- Your child has a fever over 101 degrees F by mouth.
